<i>Displayed messages</i>	<i>Code</i>	<i>Meaning / measure</i>
	9061	= Error in recording system (The MTCO will record these errors on the chart, ➔ see page 39.)
	9062	
	9063	
	9430	= Error at "B7" v-pulse output
	A411	= Disconnection towards indicating instrument
	A423	= Error during pulse generator communication
	A822	= Error in pulse generator key / serial number / signal (The MTCO will record these errors on the chart, ➔ see page 39.)
	A400	= Power loss (Error code cannot be found in the error memory. The MTCO will record a power loss on the chart, ➔ see page 39.)

Trouble shooting

Only after having remedied the error cause, e.g. in case of an operating error, will the message automatically be deleted.

In case one of the messages is shown repeatedly, immediately consult a Siemens VDO service partner!

Updating the chart carrier

1. Open the drawer and remove both charts.
2. Close the drawer again.
 - The MTCO will automatically update the time of the chart carrier, and the error symbol and the time will then stop to flash.
3. Open the drawer and insert new charts if necessary. The MTCO 1324 will be ready for use again.
